

Problem : **Word Shift 2-Left**

Write a program that allows the user to input a word, then shifts the letters two spaces left, wrapping the two leftmost letters back around on the right. Your code must actually rearrange the letters in the array used for the inputted word, rather than merely print something that looks right. You may **not** use a second array.

Examples :

<b>input</b>	<b>output</b>
abcdefg	cdefgab
stick	ickst
